q.

# Defense:

## —General

—-5 stances:
 kicking: all kicks available. right toe in horizontal line with left heal. Feet narrow enough with fully engaged tension in hips/right hip. Left leg slightly outward. Can long guard. Set up kicks with weak punches. Long distance.

Dutch: hand leg combos only.  lead foot slightly farther ahead. Butt back for punching ability. Cannot check. Cannot kick above legs. Can sometimes teep. Punching distance.

kneeing: same as kicking but butt is slightly out. Transitionary guard for attacking knee walk. Fake teeps and grab their guard. Bait them into throwing a punch for counter. Slightly outside punching distance.

punching: boxing stance with internal rotation both legs. Lead foot is horizontal and right toe points directly forward. Sit down low. Shoulders hunched to make turtle shell and put head into it. Transitionary to take advantage of punching opportunity. Weight 50/50. Slightly outside clinching distance.

 back leg: back door under nuts, front leg heavy, defensive , transitionary

—-transitioning stances–
Kick to dutch: drop lead leg forward sit down butt out

Kick to dutch: punch high/ set up body kick, sprint step into dutch

Kick to knee: butt out, back leg slightly back

Kick to back leg: rear leg comes left under nuts

Dutch to kick: pull lead foot in and engage hips. Or pull rear foot up

Dutch to kick: set up with standing cross or standing lead upper. Or cross landing with lead foot, step up with rear.

Dutch to knee: standing check hook into butt out, grab with right knee

Dutch to back leg:  sneak step while pivoting

—principles—

Be aware of what side of them you are on for attacks and escapesZyz6 to

Be deliberate with range. If in range you must be setting up counters to firing shots with intention. If they put you in range without you intending, abort.

Right hand always tracking their chin
Left hand always tracking their right hand

Chips, feints, angles, in/out, stances, defence

Try to move outside their peripherals

Make them go backwards if they only go forward, angle out or hang on their neck rather than fight backwards

Start with leg set ups, then body set ups, then head set ups

Never ever let a kick go unpunished

Cut off their angle without following them controlling range to back them into a corner and go all in. Follow their back foot

If the ref breaks it up, get center of ring when in the ropes/ cut them off from doing that if they're in the ropes

—---------Gathering data:----

If they don't move after their strike, capitalize

If their lead arm is out, switch kick it. When they bring it in, stiff 12

If they squat over hand then 12

If the drop lead hand, right punch
If they drop swing arm on leg kick, left hook

What side are they giving you angle of attack

When they have a lazy guard, up/down them

Combo when they shell up

Fire when they step, off balance, or are expecting something different

If they rush in Teep and circle away from power shot OR tie up OR  rear knee/ pull overhand/check hook/sweep/ angle back switch kick to

If they come in chill Start with big feints

If they come out checking both side then hard 12 step out, or in and out jab picks to punching body/head combos

If they dutch block then kick harder

If they check high then kick standing leg, if they check low kick the arms

Sprint step when they check or switch

If they drop their hand to defend a body shot, set trap and fake and go up top

Hook lowkick, if they check, next time hook head, hook body lowkick

If he is slipping, feint and headkick

If they fade head back with no step from single shots, punch flurry

If weight on their lead leg, leg kick

-----Guards

Guard: Right hand nuke always pointed on their chin. Left hand always is in front of their right nuke. Fingers above eyebrows. Elbows sit on ribs. Torso turned slightly. Right thumb next to eye. Can close or block. Left shoulder all the way up and in front.

Shell: pinch elbows together, shoulders up and in, gloves above eyes, angled down, absorb energy into feet to return fire. If guarding for a hook, make sure the arm on other side is guarding between the front of face and the side of the head.

Long guard: shoulders up. Move forward by pushing off with backfoot. Left shoulder not creating holes. Right thumb on temple. Extend arm for cross. Left teep or frame when hook. Set up knees when jabbed. Spam left kicks

Philly shell: used inside only. pin the arm. Make space with bumps and frames

Diamond guard: lead underneath, elbows in front aim, to clinch and knee

Dracula guard: right hand on top of left shoulder or palm out covering face with chin tucked and buried in the elbow crook, left arm long guard. Point elbow at punches. Used to defend elbows. Plant Heavy. forward knee style. Leg kick from distance. Close distance. Use briefly. Stiff arm contact and rear knee. Clinch entry by grabbing back of their head/neck.. Can elbow from both sides.

—-Footwork:
Push with the opposite foot in direction you're going

Close range: peel, roll, inside boxing, grabs, pins

Mid range: everything

Long range: pivots/angles, L steps, step in out

Idling: Forward, back, left, right motion in micro steps where weight and head follow foot. Used to push off and go any direction. Used From any stance. Incorporate defense like slipping. Use this on the pauses between moves and never be still

Diagonal left forward: step diagonally forward with lead foot

Diagonal right forward: right foot forward and slightly out, slight squat while lead food catches up at an angle to step back inward towards opponent 45° from where you started.

Diagonal left backward: step lead leg back, shoulders stay in line protecting chin and angle/pivot diagonally. Think slick movement. Can explosive 2 step pull across the centerline line

Diagonal right backward: step diagonally back with right foot

Shift left: big diagonal push left

Shift right: in one motion backfoot comes in line with lead foot (horizontally) and lead foot replaces the backfoot as it goes back while you take the angle to the right.

Switch backwards: where all weight is on right foot.  Used after a backwards pivot/angle. Minimize the switch.

Keeping distance: moving in and out for kicks always ready to teep. Fake teep for knee, switch stances going backwards for kick, step drop in if they are closing distance too quickly.

—-Step Behind—-

Step behind/ sneak step

Slip step behind: head does not go forward and back while slipping, upper body slips hiding the back foot stepping up

Slip step-pivot step behind:
Pull step behind:

Step behind squat: after exploding squat directly under their hook, looping puch or grab

Stutter step step behind: fake with lead foot going forward, pull back foot, step behind

—-Circling ou/ cutting off in the ringt—-

L step right:lead leg to back foot while back foot goes right.

L step left: left foot back and out slightly, bring right foot to it while shifting and catching with left. Should do a 1 foot pull before the l step to get more distance

Step left foot back inline with right, pivot backwards keeping shoulder up

Push with left foot diagonally backwards to the right

close range: Step pivot left
Close range:Step pivot right: when you are boxing, heavily on the right side, and not expecting leg kick at all. Can step your lead inside thigh touching theirs or on outside of their foot before pivot depending on clinch or boxing

-Angling----

Start on the correct side of them

Laser pointers on the at all times

Sharp forward movement then sharp angle movement

Left angle: step with lead foot 45° and keep centered when stepping up with back foot

Right angle:  back foot come up and slightly out, front foot comes up slightly to catch the angle, take head offline and slightl dip. Can pendulum, jab/overhand/hook, right uppercut,

Left pivot: step out with lead foot and pviot

Right pivot: pushing hard step out with rear leg pushing hard with the lead and turn staying in Ortho (can elbow) or pivot to Southpaw or if boxing and on right side step lead foot inward in the outside of their lead foot and pivot but only whenever far to the right

Step behind: (jab) step inward to the outside of their lead leg and turn to the backside of them. Careful of leg kick, be quick

Step behind: (cross) step outwards and pivot or cut angle

## -----Legs----

Tall stance

—Teep—
Teep1: swipe with knee
Teep2: catch heel with lead hand. Throw to their ass. Can use this to load hook/overhand.
Teep2.5: catch with other hand on top and keep it to your chest to stop reteep. and pull or drop and left knee
Teep3:pivot in or away, step, return with knee
Teep4: lead hands swipes inward and down, hook
Teep5: Step back and at an angle while redirecting with elbows from dutch
Teep6: pull leg back if teep to thigh

Catch Teep to punting their calf putting it down, calf kick

Catch teep to knee thigh, drop to leg kick

Hold teep after swipe at the heel, turn so they can't reteep, pick up heel to sweep/off balance

Swipe their teep so that their foot land far away and you can step in behind their hamstring, use your arm to wrap across their far shoulder and push them over your lead leg

When teep is caught with one hand, lift foot up and out

When teep caught two hands, re-teep

-----Kick:-----

Check/crosscheck: must have some bend in the knees while staying in a tall stance

Step and catch, pass/drop sweep/kick back

Step back deep with rear leg pushing off lead, kickpunch

Block and catch with other arm over/under

Dutch block 2 arms stepping one leg with the kick and slightly forward on the imaginary circle in front of you to load return, ALWAYS return punch same side. Do not look at the kick so body does not turn into it.

Check with right leg, land southpaw, left kick

Move diagonally into them while they kick to get inside punches/grab

Kick the back of their leg same time they leg kick (right low kick when they pendulum)

Teep same time

Knee up into their hamstring as they body kick (set it down forward and latch knee)

Teep kicking leg at hip or teep standing leg

Lead lowkick: after pulling leg, next time bring knee to chest and their kick goes under, land your leg behind their kicking legs thigh, your lead arm lands in front of their torso and is used to control the neck and push while turning and using the back of your lead leg (hamstring) to trip them over it

—-Catches—

Catch with ankle in armpit and other hand protecting face. Hand up during the catching in case of question mark kick

Catch kick, step with left foot putting pelvis under opps ass, shoot rear arm through by their belly as rear foot steps through to kick lift them into the air by making contact with the top of thigh

Catch kick with a block where hand comes over top grabbing by the ankle, pass and let foot drop into a calf kick, followed by another calf kick

Catch kick and knee/elbow thigh

Catch kick over the top by their ankle and pass while pushing off with feet (hop with no jump) to throw off balance

Catch kick and if necessary move leg to other side, sweep back of the standing leg and hand on the other side pushing down

Catch kick high in armpit, knee their thigh with rear leg while latching, drop the leg and throw second knee into chest as they fall

Superlek: slightly tip forward to maintain kick range with the illusion of boxing range (leg kick, switch kick, teep, circle).

----When kick is caught----

Kick catching:

Corkscrew kick: kick them popping them with your foot and immediately turning foot externally, try to lick your dick. Kicking foot becomes rear foot to set up a big knee or kick

Keep them away by pumping and sliding them down your shin to prevent sweep

Hands up to prevent punches

Hop away from them moving towards the side you kick is caught on

Keep body completely sideways to them with strong structure and hips extended (as if full extension on a knee)

Seesaw: leg is caught. Toes are pulled up, kick repeatedly by pulling and pushing so that they slide up and down your shin toward you and away from you. Pump out your hand on the same side that it is caught on. Move away from them toward the side your kick is caught on. Try to pull them close, point your toes and pump them off of you, or internally rotate and get leg out

Pull them close with wight across their hips with shin. Slide leg down never turning the knee up and stomp through

Kick them to max distance and turn leg internally and point the knee down and move it absolutely vertically downward. Run away. Back kick. Back fist

Fake right body kick into a back kick

Fake pendulum into a side teep

Get it out immediately

Calm, balanced, ready for punches

Repeated kick motions to free leg

Externally rotate hip out, weight on it,  and retract

Internally rotate hip and kick down

Put shin across their belly, push weight down and be ready to jump over their tripping leg

---Knees---

Hook to head
Cross to body
Pivot out
Long guard, stiff arm palm into them

## ----Arms----

—--Boxing 🥊 defence

Posture: left shoulder must be up and not leaving hole for right hand. Especially after a jab.
Right thumb should be on eyebrow so that you can close for uppercut and straight
Think pulling towel over neck and shoulders for posture
Elbows on the front of ribs, torso turned
Head over nuts
Use line under titties as hinge point

Be ready to pivot out of the way
Stay loose, stay moving (slip, dip, footwork)
Stay feinting
Closed fist
Move laterally when in pocket
Elbows always in when they close distance

Come UP from rolls and slips Punching
Strong legs and feet
Feet wider than shoulders, back foot pointed forward with tension.
Feet balanced weight used like shifters moving side and back and forth
Don't pause before throwing
Feet to hips push until rotation and whip the punches you
Return punches like with resistance band
Stay low, aim for shoulders, strong feet, head below theirs
Don't punch and lean back, keep forward into the fire when committing on a punch. Move laterally

Jab while blocking for hook, parrying the jab, blocking uppercut. Make sure the keep shoulder up with elbows on front of ribs

—Rushing in

Circle
Pivot out
Teep
Clinch entrance
Left kick
R Knee
Smother
Sweep front leg
Pull overhand
Pull 12
Pivot/check hook
Leg kick

-----Pulls---

Depending on position:
Pull 2 feet back the 1 foot cross
Pull 2 feet back slip inside jab l upper
Pull Over hand over their jab
Pull to back to the right for leg kick keep left shoulder up
Pull: right foot back 45 degrees with toe pointed at them

Pull/ Step in and out both feet - emphasis on pushing foot and not leaning back. Step in the then a pull. Must Wait for them to come

Pull one foot- straight back not up, just barely out of the way. Used for offense

Pull with 1 foot step to left or right

Pull smother: pull with one foot back, smother into their titty moving 2 feet in

Pull for cross - right shoulder up and slip while back foot come back

Pull for jab - left shoulder up and slip while pulling
Slip and roll jab - slip and roll staying level and stepping both feet

Slip pull - slip either way and pull

Pull while stepping lead foot very slightly forward

Drop down under jab/cross vertically front foot move forward slightly

----Slips:

Outside slip jab: bend knees, butt out, 45 degrees in, headbutt punch, should graze side of head. Shoulder goes down and knee bends. Other side hand up. Can turn, momentum into arm, overhand, or squat and uppercut

Outside slip cross: push and pivot off of back foot like a cross is thrown. Think headbutt punch. Land uppercut/hook when their punch retracts

Inside slip cross: same as outside slip jab. Head straight forward.

Inside slip jab : pivot like cross, head under punch, head forward, bonus points for grazing. Good overhand at the same time or long right knee

Squat lean back: one step and fire or two steps and wait for opp to come in before firing

—

Side step to same side as their straight shit and hook over

Outside slip straight punch to body

—Rolls

Roll: step with both feet, head goes directly to others titty, head low but not too low, balanced and ready to enter pocket or strike back and to go into a taller stance (can hook while rolling!). Consider pivots after rolls for more distance

— Body

Body punch: squat and swipe with the same side elbow keeping hands up

---Jab

Hard Jab parry to tie collar tie/tie up:  for tying up on the same/other side. Thai box stance.
  Other side, parry jab and use left hand to try to trap their hand in crook of your elbow or arm triangle them. Do not headlock around their neck
  Same side- parry and collar tie in the same side moving in and aware of their right hand. If they keep too tight for collar tie then go to their hip.

Hard Jab slip bury: start  with head starting lower than their head. Depending on what side you are on, slip inside/outside dipping inside, bring face to their titty, elbow pinning their arm with it flared so they can't move it. underhook standing up.

Quick jab: push off left foot while stepping to right and slightly back. Left foot drags with you. When legs are narrow, switch kick.

Quick jab: rocket overhand over the jab

Long Jab knee: rev jab with right hand (keep it up), step up and out with right leg at same time, left forearm side pushes against jaw, left knee

Long jab latch boxing stance: depending on your position to them, outside or inside slip

Long Jab return: rev jab with right hand, immediate cross, step out leg kick (or set up for left knee)

Long jab sweep: when they charge forward  slip/parry other arm goes across to grab neck while you sweep their lead leg/ankle

Long jab clinch: slip deep and step like double leg. Shoot shoulder into armpit and shoot hand around. Link hands and pull head to head

Long jab: shift weight back and to right and spot kick or switch kick

Long jab: step right and right lowkick

Long jab: inside slip, lead hand parry motion to trap their jab downwards towards your left hip, cross

Single jab: inside slip with a right hook to body, left hook to head

----Cross

Long Cross: knee as soon as the cross comes
open up hole for the cross, rev top of glove with right hand, rev elbow into the right pulling their fist to your hip and shoot knee

Longer cross: long guard, step left outside their cross while parrying and throw right kick, for insurance make sure their fist on outside of rear hand

Long cross: while pushing off back foot for overhand, lead hand blocks/frames deflecting their cross towards your right hip

Parrying: same side as punch, turn in wrist to shut off the valve and keep arm strong. Do not reach.

Cross : long guard forearm deflects cross, left spot kick. Can switch. Can pull them downward slightly while deflecting to head kick. Do not open up too much

Block: up jab extending fully with shoulder up to block their cross while pulling back with rear foot and slipping right, step rear foot up to land uppercut, roll

Cross parry/deflect to tie collar tie/tie up:  for tying up on the same/other side. Thai box stance.
Other side, deflect cross same side and use right hand to try to trap their hand in crook of your elbow or arm triangle them. Do not headlock around their neck
Same side- parry and collar tie in the same side moving. If they keep too tight for collar tie then go to their hip.

Cross slip bury:  head starting lower than their head. Depending on what side you are on, slip inside/outside dipping inside, bring face to their titty, elbow pinning their arm with it flared so they can't move it. underhook standing up.

—--Hook:

Left elbow as they hook, right spear elbow, pummel under their arm w right, weight forward and knee the back, leg comes down behind theirs

Cross: as soon as their shoulder opens shoot cross and step lead foot deep,step and roll out. When rolling can grab under their arms or strike

Beat their left hook: As soon as their right hook hits your guard, shoot left hook before they do. Can bait it in. Energy goes forward, finish the hook.

Pull: pull and leg kick

Frame: when they toMeathook. left frame at elbow on jaw and right hand blocks hook, commit to falling directly forward into them! Must do this before the shot is already coming. Do not be in a position where you get knocked over. Hand on back of their neck. Push weight forward loading read hip, pendulum knee upwards, escape under elbow.

—1 2 3—-
Ride jab , turn deflect cross and your own cross beats their hook, roll, inside bump, left uppercut, left kick

## -----Clinch:-------

—---Defensive grabs/entries:

Hook: right palm on forehead, slightly come up into their hook, frame on their forearm, can latch left around neck and put weight into them and left pendulum knee

Overhand: A shape strong frame (especially with left hand). Left arm bent so that you catch their bicep near your elbow where it is strongest. Must be committed to falling forward into them so that you don't get moved. latch the back of their neck at the same time with right hand, pop, then pull both legs back and knee

Long jab: slip deep and step like double leg. Shoot shoulder into armpit and shoot hand around. Link hands and pull head to head

— Preventing Grabs –
Shuck collar tie off by hooking motion, bumping hard with shoulder, and pushing them forward with your forearm

If they synch in a good collar tie, titty bump the tie off and move them into an arm triangle

If the double collar and pull head down, arms locked, pinch their cup with your fist and run them into the ring or pin them with your shoulder against cage and pummel body lock when they move

If they stiff arm you in hips, swipe with knee, twist back and forth quickly, or if they come at you turn them about face

If they arm triangle you, step leg deep in and inside thigh bump them while arming your arm over them to sweep

—-50/50:

when their elbow point is high on your shoulder and wrenching neck, look towards it and pop under elbow

Collard tie: when the come in for collar tie, use pinky side blade of forearm to slide down their forearm to guide their arm inward so they cannot establish a strong collar tie?

—--Pummels

Double pummel: their hairline is in your jaw. Wrap an arm all the way over the top of both of their arms and grain their bicep. Other arm wraps over first arm to grab your tricep. Sit and turn

Double pummel1 attempt: When they grab attempt to titty/shoulder pop their arm toward their opposite shoulder while doing a hook motion with an extended arm. Can Shuck them into an opposite side shovel hook. [They shuck your neck grip, you pummel under to hip control]

Doublepummel2: grab their neck and same side titty to their face while squeezing up from hip(toothpaste).

Double pummel3: using arm on their neck, hand to their jaw and extend, match with other hand and turn

Doublepummel4: Lock both hands on the back of their head/neck, hips shoot back then forward slightly while moving lock to their crown, pull theirhead down to navel while step leg back and pinch their arms to your chest (hand should be above their head at your chin), walk back until they're on their knees.

Double pummel squeeze: pummel in by making space at their elbow by lowering base, into long clinch,

Double pummel: push against their jaw, other hand gets head control at crown and go to 5050, pummel 2nd arm in

Double pummel: turn and headlock, shin shield, strong control of their neck and head

Double pummel: tube of toothpaste, your hand around to their other side ear to pop off their grip, with other arm pinky up underhook points to the sky and slide them horizontal down torso to lock them up

-----Neck lock-----

Hand/arm by neck to block their lock

Off balance them to swim arm in and use head to prevent them from good positions

Lock defense1: hand to their hips, same side foot inside theirs,  come up  and under with your arm (opposite side of their neck control) all the way until armpit to armpit, keep swinging over until hands on their  head all while swing opposite leg back and around preparing for knee

or if you cant push to armpit -  when they knee on the neck side pull other way while hips go bladed and shoot towards them when they knee

Lock defense 2: if arm inside lock, push it forward to create space and pummel other hand in

Lock defense3: if bad lock/pummel on you, lock the back of their neck around the outside, slide lock up to crown then to their elbows then bow/step back to pull their head down

Long clinch lock: squeeze shoulders together and head under their jaw

----Headlock----
Headlock defense1: push on jaw and bicep control

Headlock defense 2: can over hook, or bring locking arm over their head to pummel under, get shin in.

----Body lock----
Body lock defense1: shift weight onto toes, knuckles above their titties then push down

Or gorilla stance butt back titties forward, pull arms back so your forearms are behind their elbows, wiggle your butt back while hand slide down your groin with palms facing forward, turn

or squeeze their elbows inwards, sit butt back and down, pull their neck ouch in armpit and turn (knee / sweep)

Body lock defense2: off balance, hips away from them, put weight down into their forearms with your fire arms, step back when grip broken

Body lock defence 3: shin shield full contact pushing into them and you pull their head / elbow in towards you to extend them. If they attack/grab knee shield, add a butterfly. If they knee shield, grab under their leg and pull

Body lock 4: wrap the inside of both forearms tightly around their neck and where their skull meets their neck, big turn

Body lock turn: head position, hips back weight down, hand under armpits, pinch elbows step to the side and place hairline under their haw while taking the wizzer with their arm closest to them, other hand on their neck and knee

—Counters

Right body hook: (check) left hook same time

# 👹👹👹👹👹👹Offense:

## —General

–look for–
Low lead hand > step right, cross
Low rear hand> body attack, head
Step pivot with shoulder open> step right, cross
Switch with shoulder open> cross
Not checking> bomb low kick
Check to high> cut kick, blitz, body
Stand too tall> blitz 12
Bladed> lowkick
Lead arm out> left kick it and 12 when they fix
Dutch block> kick harder

–strats–

Distance, Stance, Defense Position, Angle, Feint, Chip, Combo, Angle, Attack/Exit

Circle: Teep, chip, circle, and kick/knee sequences (Make them punch or step to side / slip into kick/knee)

Dutch: low kick combos with stance changes

Outside boxing: Foot work and lead side to set up the right hand (angles, 12, jab overhand, 234)

Inside boxing to clinch to knee game: chain together with pummeling, to bicep control with knees, to inside boxing

—-Step Out —-

—Attacking Right:

Jab between their guard stepping left and step right while retracting. Look for openings in a step pivot or switch

If lazy lead guard, Step right, land cross with forward momentum and lead foot lands, shooting behind guard aiming at shoulder

2, pin lead guard, step right, 2 3 lowkick

Step right, draw small circle, side teep

Parry jab stepping in for left knee or to the right and switch kick

Jab switch kick

Jab switch hook, left kick

Jab pull, shift lead upper, cross, switch kick/knee

12 step out /low kick

Jab, step out, 12 pull OR 2 3 pull low kick

Step right dip jab, right foot steps up while throwing r upper/hook/over

Step right jab, 2 stepping up, switch kick

3, smother, shovel hook or low kick up

3 pull counter

-step up/right where you can barely sneak jab through their long guard and be able to pull out with the new angle.
- throw jab up and squat over hand/legkick. Or -step lead foot with the cross. Or
-pendulum kick, Or
-(fake pend) draw a small circle with knee to position lead teep Or
- fake pend bring rear foot up to load for 12. Or
-if they shell, switchkick.

—Attacking Left:
Step pivot:  of left side, super small step to get the angle, do it from the outside for kicks and mid range for dutch boxing

Step pivot to Stay outside of their cross
be ready to check

spam cross in between guard OR counter r knee OR pivot high kick

Pendulum, left  l step, fake pendulum 12

Step pivot with rear foot sliding up, teep

Step pivot right kick

1, lead upper, cross,pivot hop into r kick

2, pivot (shoulder cover chin), step left foot, double jab

2 step with lead 3 step back foot up Leg kick stepping out left, pivot

2, pivot, 2 stepping lead foot, peel r hook, pivot lead upper, r kick OR pivot, knee

2 to body, peel upper to plexus, pivot knee

Check 3 into knee or kick

3 step left, pivot jab or low kick down

R Knee counter

Step Pivot to jab in between guard (bladed hips)
-when pivoting land under nuts for side teep slightly bladed),
- can (hop into) a kick (pivot keeping hips square aimed at them, angle of kick barely clearing their shoulder aimed at chin) or
-chop down into clinch or
- fake teep/squat for overhand or
-Jab over.
-shoot in with the angle (12, squat over, hook low), or sprint step

—-footwork—--

Fake pull correct: step while feinting, lead leg pushes while back foot pulls, back leg moves back into jab/cross/pendulum/r leg kick/l step/ pivot. Used to engage by inch in on the opponent. Minimize movement with ability to pull and bail.

Fake step left : big 2 step left to get opp to follow, then small half step left to fake(lead arm sells it), it stays put while small step up and right to angle inward for right hand as soon as it clears their lead handguard. Right hand land while left foot lands

Fake step right. Big right 2 step the half step right, half step left, pivot, jab

Fake step to hook: big 2 step left for them to follow, then half step out, lead foot closed the door while throwing hook, Tyson shift feet to angle

Angle right and hook: right foot steps lateral, laser pointers stay in them, left foot steps in between their feet, squat , loading jumping hook

Angle left and hook: step left, right leg courtseys behind, shoulders stay in same position, leaping hook through them

—Sprint Step—-
Hop into kick

Sprint step cross: head drops under punch level while both legs split, rear leg/ankle totally straightened, both feet land at the same time, kinetic chain to fully extend through with cross, can follow up with kick either side

# -----Kicks----

—-Teep—

Thigh, hip, bladder, solar plexus, high sternum, face

Use defensively, offensively, and to control

Step with jab and as it retracts, pull right foot under nuts for teep

Switch teep
Fake kick into teep
Slide teep
Thai hop teep
Side teep
Front kick
Flick foot up and to the side and teep

Rear teep to leg, land under nuts, front teep >
Mongatoon punch, elbow, or knee combo into kick
Question mark either side
Fake rear teep to left knee or vice versa
Fake rear teep, land feet inside, latch top grip, push and pull into curved knee
Right kick to teep
Fake rear teep switch pivot hook left southpaw, kick (or step deep behind while hook hand in front of hips and sweep)
Fake teep, lift up up, close line them, lead foot lands behind between legs as a table top and titty drops into them
Fake teep, lift up, spinning elbow
Fake teep, pivot out

-----Kicking:-----
Always distance management.

Kick when they step, shift weight forward, retract leg

Multiple kicks: fall into position in the pogo after the kick so you can move in direction of kick

Step pivot r kick
Step right l kick

—-Right kick—

Right body kick:. Kick through to their other shoulder. 45 on contact so they can't come in.  Arm drops not swings while shoulder is up and engages lats hard. Stand tall and pivot hips through, humping hard. slide back after. Be able to push kick immediately. Ready to pivot if theyre coming in. Ready to clinch if they are really coming in. Into 50/50 with top arm opposite of kick thrown

Right head: chop down into neck, come up vertical, pivot hard on standing leg, kick arm straight down with shoulder straight up, rear hand protect face, all hip

Squat kick,(check) kick punch, strong cross strong kick, fake kick teep

Right kick, step pivot, fake kick rear teep, step left knee while latching their neck, right elbow

No catch: right kick and make brief contact before externally rotating hip and retracting leg

Kick punch: kick and do not cover chin with shoulder so you can load the punch. head moves down and forward as leg kicks directly back and up. Land hopping into right kick if going left. Land while left slapping if going right and leg kick (don't rotate too much and stay balanced). Or land and sink into a liver shot leg kick

Right kick Fakes:
right kick to ensure they check, fake right kick while sliding rear foot up>
-stiff arm, leg kick
-step to kick under their check
-rear leg comes up to narrow stance, switch kick
-liver hook or sprint cross
-keep shoulder forward during fake, right cross, head kick
-Turn kick into teep, get close to their check
-rear foot steps in front during fake, switch kick from south paw
-Kick their check lightly, scoop their heel, side teep their thigh, switch knee

—Left kick—

Left body kick:  Courtesy back. Do not have face opening on return. Dick to face. More hip. Small switch with hips engaged and shoulder forward. Relax

Left high: switch, step, or shift weight to backfoot
Left kick, when they arm block switch right kick
Left kick, spring directly into right low kick

Fakes:
Circle right, galloping, land in switch going backwards
Switch in place, fake kick,step in 12
Switch in place, right (lead) hook, left kick
Double switch right kick
Switch, switch right flying knee
Stiff arm, switch moving backward
Switch, leg kick

Fake pend:
Sting with pendulum. Fake it with a little hump flipping your nuts to the left, chip with right low kick

---Leg kicking—

Your hip to their opposite hip
Weight moves directly thru them, shortest path

Right leg kick: 45 up for speed [naked], 45 down after combo, step deep, kick arm out, upper body turns over, head forward, ALL HIP through their legs, hard hip rotation, pivot not as necessary. Land strong and exit with long guard or angle.

If they jab and you are positioned to the right, land 45  lowkick from outside the jab moving backward/ If they hook chop down

Step out lowkick: Jab and step right on retraction (after already positioned to the right) r low kick > shoulders up (for hook) and intercept their cross while throwing rear knee, or 2 3 low low kick, or kickpunch step left knee, or fake low kick and lead uppercut low kick

—--Pendulum Left leg kick:
Kick as soon as you load. pendulum from distance where your fingertips can touch them, spread their legs, instep is deep all the way in on contact. Keep shoulders inline the entire time and during return. Small opening with the hip to aim trajectory 45 degrees right of center. Should be able to use it as a pick. Body weight goes through the bag with small slip. Sit down on the kick slightly and aim low.

Switch: pendulum 70% power, small switch and bomb left high kick

Back leg: lead foot steps out with cross motion then pendulum like motion to step between their legs while lead lands in their back leg

12: pendulum, land in boxing stance with back foot loaded, jab cross

Knee: pendulum, switch knee while framing across their face

Fake: Left pendulum kick repeated, fake pendulum bringing rear foot up,  into right leg kick, or side teep, or 1 2

## ----Knees----

Hollow body with butt back. Push off hard and hump with only the kneeing sides hip. Momentum forward and hips extended as if kicking. Shoulder in front of faceHeel to but

R Knee when they come forward

Left knee offensive

Hump walk briefly and fake teeps and long knee

Long knee when tall, latch knee when posture breaks

Watch for left hook, be ready to throw left knee same time

When they dip and come up, latch onto them and pull their head down while pinning their arms to set up switch knee

Long knee: right shoulder up. Hand Can drop but should be fully extended onto opp's head. Hip is fully extended towards opp. Left shield is up. Point toes.

Step knee: set up with r teep/ fake r teep or jab cross. Grab the head

Touch/pull hands long knee

Pendulum knee:  from neck and bicep, weight falls forward on to them, as they move back feet pendulums forward and lead leg straight knee up.

Latch knee: small skip hop forward before and/or  after a large step in and grab their opposite shoulder behind the neck,.other side guard up! to knee

Knee and shield: long right knee, transition to shin shield, left hand pins and right hand braces on their jaw, drop shield outside their foot, short left knee,push out and away from them and left kick. Be ready to add butterfly if they grab knee shield

Skip knee: from neck and bicep control, arch like a damn cat,  front foot raises while back leg slides back, hump and shoot knee

Fake skip knee: back leg slides back to load rear knee, shoot lead knee straight up instead

Round knee: same motion as a body kick for short range, point the toe

Fake into left knee: teep, lead teep foot position (under nuts), left rear leg up and forward slightly while loading the hips, left knee

Fake teep knee: teep, thigh to ribs for fake and step hard for knee. Can gallop forward with fake teep/knee/check (always high

Rear teep: land rear teep, step it up and left knee

—Jump knees:
Squat right jump knee
Pendulum left jump knee
Right switch jump knee
Left switch jump knee

----Elbows —
Retract shoulders for first elbow

Push guard and spear elbow

Push pull for slicing

Follow up with more elbows or grab them

Horizontal Elbow: in clinch pull their elbow to their titty and pull same side leg moves back and inch, rotate into elbow.

Spear Elbows: spear elbow with extension to start combo. Pin the forearm new their elbow and extend brace to set up targets

Down elbow: slice down use instead of horizontal to deal with a guard head on

Tomahawk elbow: chops/spikes down with extension, use body weight

## ----Punches—

Jab: that stick. Bump from ribs and turn fist over, can step pushing off with rear leg, shoulder touches chin

Cross: lower stance, power from backfoot into hip into shoulder, elbow gets bumped off ribs when torso is completely turned. everything (head) comes forward across the centerline, full extension where right armpit under left knee (squeeze nuts with thighs), left shoulder forced to move backward, arm finally snaps like a whip, shoulder touching chin. Backfoot pushes until hips/torso are completely turned, heel pivots out as arm is released. full core engagement, think throwing someone over your back.
-step lead leg up as cross lands to pivot/ bring up backfoot for hook lowkick/ angling right
-step backfoot up as cross land for power/12

Regular Hook: right shoulder shift forward, subtlety dip and load, twist, pivot back foot as it pushes through. Elbow is bumped and comes in line with fist, Head to the other side of the bag, don't move head upwards, land with knuckle, don't pivot lead foot. Thumb horizontal on distance, thumb up inside

Hook: headbutt slightly in front of the other side of their head, head does not come up at all if punch is not followed by kick. Keep head at same level under their glove if their hands were to reach out, can right hook the body where head goes to their other titty back to head hook while your head does not move up

Boxing check hook: step directly left where foot points all the way right from boxing stance. Shoulder up while throwing hook.
Sit your ass back when pivoting out 90° so that you can land for a loaded z-hook.

Z hook: bowling ball coming at their head, jump towards them 45 degrees head on, squat into pocket with shoulder positioned for bump. Land with knee into their inside thigh. pivot to the right and throw left hook as they run away.
-setups: cross, z hook. Pendulum z hook. R low kick (shoulder open) z hook. Follow z hook with cross or lowkick if they move back

Roll hook: once inside can use U or circular head motion shapes to place hook, can hook and half roll and hook same side, circling your head,  keep it short, do not twist too much, and go to the body as well

Shovel hook: short and stabby to the body, big and powerful to the head, especially southpaws

Liver1: when elbows not tucked, step/slip,elbow on your pelvis, squat and rotate, aim for the side of the 6 pack

Liver 2: when elbows tucked, hook around the guard to the liver

Lead uppercut: at distance, right leg shift back as it is thrown. Squat and push until rotation. Can go 45 out or up. If 45 out, must be sagat style curl for load.

Right uppercut: feet same as cross, squat and push until rotation, snap the punch. Must always be set up. Generally just goes up or straight to body

12:
Landing each foot with the punch. Head stays offline slipping both sides. Corkscrew your shoulders inward, retracting jab meetings the cross in front of you

Moving 12:
Forward: step lead forward
Left: step lead leg left
Right: step back leg right
Back: step back leg back

Slap bop: slap the back of their close guard or their lead hand long guard and send cross. Should be on the same beat. Can also land head kick insead. If slap jab then pull shoulder back first like a jab elbow. Create openings and exit out after landing

Feints:
Jab body to hook
Hook body to head hook
Feints overhand lead upper

–counters—--

Weight back for pull counters

Weight forward for block counters

—-Peels—---
Everything below Start with a step pivot cross between guard or a big outside slip of cross

Peel for left hook: step jab, step slip forward and right, r uppercut, peel right, left hook through guard

Aim for the small opening in their shoulders/collar bone so it hits when they tuck chin

Should try to have head slightly under theirs when inside, pressing up into shots

Short cross, Peel right hook

Long cross, peel with hopstep for distance, right hook

Long cross, step pivot and shoot another cross in their guard

Peel hook their lead guard inside forearms right hook

Cross to body, when they break posture, peel right uppercut head kick

Peel grab with hook motion, right knee inside against their lead knee, pin at their elbow, strong neck grip with elbow in their shoulder

Step back pivot a few times (towards their rear hand) to bait them forward with shoulder up with almost bladed torso then fake a small back-lead-step-pibot and close the door with a hook/switch.

Step back leg up past lead leg into southpaw while covering with hands, peel by replacing front foot with backfoot

Pull back leg a half step to intercept them with an overhand, pivot lead upper, peel right hook

-----Pocket punching:------

Bump 45° up with shoulder to make space
Latch: Squat and come up into them
Head always looks forward into them
Use bottom elbow to pin them high hand on eyebrow
Roll between inside Philly shell and middle positions
Use frames to transition between punches and inside positions
Drop shoulder to elbow pin if frame too far on the other side
Practice throwing short stabbing punches

Always bring head to other side of the bag when punching and rotate tight
Always roll between inside positions
When they are in Philly shell, jab the body to open up the right hand. Time the shoulder roll

When they use pressure, your lead knee inside theirs and step behind them with other leg controlling their lead arm (push behind elbow)

Punch the inside of their guard (forearms) with hooks to open it up and send through the guard

When they grab or frame use under hooks to spin round them or control hip and bicep

When they step back keep knee in their knee and keep head latched

Target their arms and shoulders to open them up
Step roll to move around them

Slip the jab deep and step like double leg. Shoot shoulder into armpit and shoot hand around. Link hands and pull head to head

When they're inside w Philly shell, grab their lead elbow protecting their body

Elbow grab: Use frames and arm punches to set up,  reach across their body and grab under their opposite elbow  and pull to set up body shot with other hand

------Hand Traps--------

Touch hands as they come forward and pull hands down to right hip while right leg sweeps the outside of their lead leg, follow with knee

Touch hands, right palm on their fist, throw left knee while left hand swipes their hand across their body, left arm protect face

Touch hands and jab

Touch hands and sneak lead leg back a little bit and throw right kick

Touch hands and Wait for them to push forward, remove pressure so their weight shifts into lead leg, lowkick while moving backwards

Touch their hand when hand fighting and long right knee, fall into neck and bicep control (or pin their wrist), all weight on them, either curved right knee behind shoulder blade or fall/push them forward and step for pendulum left knee

Hook into their guard and hang on it

Fake shovel hook to their body and uppercut through guard for latch left knee

Cross and pin the hand, bring right foot up to angle while switching to the pin for the left hand, throw right cross, leg kick, body shot, high kick etc

Pull the hand down to high kick

Fake teep and pull their left arm down and elbow

Stiff arm: shoulder extension. weight down into chest. Or Squat weight up into chest. Squat stiff arm into bladder. Set up body/head/lowkick combos or drop into elbows. If they swipe stuff arm down load the hook or left kick.

## ----Clinching:

NO Sissy gripping!!! Elbows on the lower half of their delts spreading outwards.
Prevent their strong neck grip by squeezing your elbow inward
Turn/sweep/push when they pummel or knee
Get to lock position
Knee when they are adjusting grips
Knee to pummel / progress grips /
squeeze and turn to knee
Bring their elbow up to knee
Pop their elbow up and go to hip grip
Keep feet wide
Trex arms
Keep strong proper Puerto Rican badass
Get perpendicular to them for knee and sweep
Push / pull
Hips in too much without body
Crawling up /toddler toes giving body lock
Falling into body lock rather head into tiddy hips out
Kick when exiting
Fake a dump and switch direction
Neck lock, move to bicep control, move to hip

Don't Stick head straight down for head control
Do not wait to knee
Dont turn sideways
Don't have head in front of feet
Don't headlock > lock instead
Don't put hand on tiddy to post
If they're getting position sometimes sit down instead of giving up position to try bicep control
Don't get bowed with hips forward
Default to Vice grip and hump knees up middle

Use head as pivot when turn/throw
Constantly offbalance and break their posture
If stuck on outside then arm loop always (thru top or bottom)
If shin guard on you, try to step off and scissor, hump them away or body lock and lift, or if strong the switch hips, get around heel and sweep
If they try basic sweep, pull your heel to your butt to avoid trip
If they frame then Sweep Sweep
-if they frame on your jaw, close distance and try to step around and behind them while pinning their elbow with your shoulder as you slide around putting them in arm triangle

When they try pummel neck arm, push turn

—-Positions—-

Double pummel: break posture by forcing elbows into them downward at 45° then knee. Pull and rip. Let go by dropping straight down into them after neck pressure, send in punches as their head is still up and re-grab

Neck lock: curved knees to shoulder blades and stomach, sit down and turn them.

Neck& bicep: turn them and send knees. Overhook the arm if it gets sketchy.

Double bicep/extended: transitionary

Body lock: dump or turn into hip control

Hip and bicep control: use to control them. Transition from bicep to neck for offence.

50/50: pummel in for bicep or neck control

—Traps–

Arm trap overhook: when you have over hook, hand fight on the other side to bring their opposite arm inwards so you can grab their forearm with your overhook arm. Quickly establish neck control on other side, maintain head piece, and transition overhook arm to double pummel

Broken pummel: When you break the frame on their neck control, use your other side arm's bicep to scoop under their elbow, turn your torso to get around it,  and transition to arm triangle

Burning eagle: hip and bicep control. Fight for their bicep to distract them. Bring their bicep arm to their belly. Use the hip control arm to trap their arm. Maintain head control to prevent their other arm from getting free. Bring your free arm up and use frame to replace head control, step back to extend them

Arm triangle:right arm over their left shoulder, trap their right arm so it is sticking up vertically (at their tricep) with head and use your left arm vertically to lock with right hand

Hip control: arm around back of their hip, grab the arm inside to control it, head contro

Back control: head on their shoulder blade, right palm on your forehead for their spinning elbow, left arm around their hip, controlling their legs with yours

---Clinch entrance:----

Micro pull downs when grabbing

Long/dracula guard collapse to clinch

Fake rear teep step foot up, forearm chop their neck and latch, lead knee inside theirs with weight causing an off balance, left hand stuffs cross, push and pull into left knee

Right hand slaps opp lead and pull in, then left slaps and pulls in their right, right hand shoots through neck, push into them with forearm, pull into latch while right knee and control their bicep/pin > come up to crown, or if they come forward pull turn with neck arm, or as leg comes down from knee slide it down their thigh to pop out their hip and push, left knee

Inside boxing:  forehead to their titty, swipe the nuts into an under hook, up into lock position. If underhook get stuck, shuck them or pull their other side elbow in to open up space or turn them

Slip entrance: slip jab, shoot left hand over their shoulder while head to titty

Step grab both hands and inward and pull in for long knee

right overhand motion can forearm chop or trap hand with crook of elbow, move head to other side, hip to hip and knee

Hooking entrance: set up with fake body jab or  in pocket, Similar motion to left hook (or overhand), land the crook of elbow around their outside arm or neck, head goes into open space under their jaw on other side, bring hip to their hip and knee, block their arm at the elbow

Missed hook: If you miss a hook and it hits thru and behind their lead guard, sink in and smother while holding their arm between chest and forearm pinched. Can also open up their lead side for your right hook

Jab chest hard, while retracting, dip and come up into them aggressively (headbutt with guard up):
-wrap their neck, pin their other hand, go to hip, go to shoulder, knee their back, when they arch sweep
-shove off, hooks and low kick
-wrap their neck, peel towards the right and left hook in their guard
-if they frame on your jaw, close distance and try to step around and behind them while pinning their elbow with your shoulder as you slide around putting them in arm triangle

Rolle entrance: roll into securing your left arm across the front of their right hip, stepping lead foot in inside of their lead foot with knee pointing into their thigh, right palm on forehead while ear against their shoulder blade, forward momentum into hook left kick

Bury in: after a hook, land in Philly shell against them pin ing their arm ith lower arm and protecting face with the other
-swipe the nuts to get under hook under their armpit as far as possible. Deal with forearm frame on your jaw by getting hips in close, chest gets lower than theirs and use your bicep to get under frame's tricep, lift the hand to the sky, turn torso 90 to make space and get your head around frame for arm triangle
-push off and hook motion to secure crook of elbow around their wrist, trap other arm and lock

---Offbalances: ---

Tripping: push and step out around them, tripping foot same as pulling arm, trip them over leg rather than sweep. Try and get them perpendicular. Use flat part of foot.  -- if it fail push pull into snap down.

Hip control off balance: from hip control, step the foot that is behind them to the front and in between their legs as far back as you can, bump their thigh and shuck them forward over your

leg breaking their posture. Transition the hand that was controlling their arm to their neck and hold them down

Sequence: kosoto (outside far leg), koji (inside near leg), ashi (outside near leg)

Ashi harai: step right foot to the right, bring left foot to it into a very narrow stance, use momentum to small hop right foot to the right and left foot sweeps their feet

---Turns. -----
When they pummel or knee or off balance
Go with your head direction
If they push on my left side, pull left (vise versa)
When they break posture, rip hard

Pull Turn : arm around neck touches opposite ear. Other foot step to side pulling hips together and establishing head control. Other hand either lifts inside of elbow or pushes under armpit. Pivot and arm pulls head downto direct into the space where you were - aim behind where you were.

Push turn: when pull turn doesn't work, turn the other way - arm around neck uses elbow as fulcrum to push their head into where your hip was as your hips pivot away

Double pummel: forehead on their jaw use as pivot point and step, shift weight back, look behind you to launch while pulling backward

---Dumps---

5050 : light lead leg they knee trapping arm / come forward from 5050 step out and pull head to floor (their head must be forward of their nuts) while turning them with neck arm, lift up under the elbow or under armpit with other arm, use head as pivot point, get hips in close (step in or pull them), can catch their instep with bottom of your foot.

Wizzer: light lead leg- loop 1 of ur arms around their arms over the top and kick out leg on the same side

knee bump inside: light lead leg- foot on inside of their foot (same side as bicep control), push knee outwards into theirs, turn and pull down with other arm around neck while bringing foot back for knee, while the bicep grip can switch to shooting under arm for armpit to armpit and try to reach their opposite ear

Knee bump outside: light lead leg -knee on outside of their, collapse theirs in and pull down same side OR you can use other leg to bump their inside thigh outward and pull them into the space your sweeping leg created

Close line: Heavy lead leg - fake teep, knee high and step behind and in between their legs while shouldering them down to ground

Double pummel pull: heavy lead leg- they give strong forward pressure. use head as pivot point step hard and look behind you the way you are flinging them. Step back and rip the same side that their head is on. Rip at the moment they are about to land their step forward. Finish with a knee or uncoil your arm to let them go and combo

Double pummel Push down: heavy lead leg - pull their head towards your pocket and their hips to you to get a 100% weight lead leg, then step up left so your right calf lands in and behind their lead calf, and sweep the leg backwards out from under them while pushing directly down on their left collar bone/jaw

Launch: if they get bladed/check, step deep behind them while arm goes across their belly button, dick under their ass, and fling them up with hips and slam down. Can set this with low kick feint

Hip control: bicep control with one hand and other around their lower back all the way to opposite hip, stand tall dick to dick, lift and rip with the arm around back

Body lock: short low body lock squeeze their hips to you while transitioning to high bodylock. forearm squeeze into their ribs, turn at a slight angle so quad sits behind their hamstring, bump the quad up and dump.

Bodylock/double overhook on their bodylock: use upper body to pull their head in front of their nuts, lift and turn

Extended Clinch:  control biceps and knee to bait the return, sweep out their leg when they knee

Faceplant: from double pummel they give you big pressure, step leg and weight back  while pulling their head down from the crown

Check: get perpendicular during check and push their chest down while kicking back of their standing leg

Check: when they check a kick, hook each other's insteps and swing their leg internally

Check: when they check and are too close, hand on their shoulder/head, other side hand on their hips/ checking leg knee, sweep the foot

----Locking offence–

Always Head pressure horizontal direction into them, hairline into their jaw,  use forearms to tighten grip, don't look down, rip them, curve knee, straight knee, face knee, break for elbows or inside boxing.

If they frame on you, overhook+neck grip. put weight using forearms/biceps into their biceps pinching their elbows in

Long lock:. Hips in. constant forehead pressure into their artery, one arm straight with crook of elbow/forearm against their neck, hand behind their hand, Rotate shoulder into them, other arm locks perpendicular behind neck, feet wide and stance heavy, when feet come together or turn sideways then whip them to ground

Short lock:both elbows are on the front side of the body.  Hips in. blade of forearm into the back of their neck, your hair line on their jawbone and forehead in their artery, squeeze, free hand locks and the elbow digs into their titty, wide heavy stance. Drag and turn them. Pinch the shoulders up and prevent pummel. Can start if long clinch and relaxed until you can find position to vice grip them

--- Bicep Control ---
Transition both to neck control before going up to crown

Transition from crown to bicep control: opposite foot moves back while a hand moves to their bicep

Knee: pull turn with and load the knee

Dick to dick, open up hip neck control side and curve knee, aim for under your armpit

Break posture by punching elbow into their chest on neck control side, hanging in their neck so force is going down and they can't pick up their leg, push and pull, straight knee on the bicep control side

Drop into heavy hand lowkick combo and clinch again

Sweep: when they knee

---Double bicep control ---

Can go to up neck control or fall into body lock

Teep: rear teep to break posture
Knee: inside of thigh to break posture
Sweep: sweep out their leg just below knee
Heel: extend leg, open hips, heel strike their hammy
Curved knee: after somestraight ones
Supergirl knee: pull with arms while push knee
Jump curve knee: bring standing leg in middle of your body while other hip opens and bring the knee in and down while standing leg hops to outside of opps feet

Step Curve knee, smack feet together jump curve knee, push pull straight knee

Teep, knee, sweep

Heel strike, super girl

—-body lock—
can go low or bring hand up high behind their head forcing their arms up

When they come up too high with their weight, body lock by dropping down stepping a lead foot in between their legs, immediately get head control, transition to upper body lock while stepping back foot back in line while turning sideways into them for bicep control

# Southpaws:

Beware the left hand

If your lead foot inside their feet then jab, if outside then cross. Can do this as 12

Jab through the outside of their lead guard, when they adjust shoot jab or cross down the middle.

Step left, cross between guard, peel right hook

Hook step left, lead lowkick

Lead hooks around guard

Rear shovel hooks

Slip outside their cross, right body hook

Slip their jab, throw cross same time

Mongatoon cross to body head hook
Mingatoon cross to chest, pivot lead uppercut
Mongatoon cross to chest, liver shot around guard, head kick
Mongatoon jab cross highkick

Crush inside leg

Right knee: frame out with swinging arm

Jab upper outer quadrant of southpaw and shoot cross at chest, when arm comes in throw right kick

Big step left, fake half-step left, step right, step left into center as cross lands

Tap lead hand down to jab
Tap and loop over with hook

Angle left outside their feet, Cross while slipping jab, hook, right kick

# Combos

—-kicks

Teep, knee same side , elbow same side, other elbow - can do this for both sides

Pendulum kick, switch kick, 4 count

Side teep, mongotoon fake teep, overhand, liver, low kick

Kickpunch or punchkick: Check Right kick and right cross on kick return
Punch and kick on punch return

Right Kick, fake right kick, left knee, overhand, liver lowkick

Right kick, cross hook, right kick, hook cross, pendulum kick, cross

Kick, float check, teep

Leg kick, fake leg kick, when they check stiff arm and leg kick

/Slip inside the jab, liver, lead upper, right hook, /slip outside jab, jab their chest, over, liver, lead upper, r hook
/pull the jab, body cross while they cross, liver, l upper, r hook
>roll, over, liver, hook, cross

Squat Step in cus damato body jab, pull front foot back,>step 1 2 > step 2,standup bring rear foot in while uppercut, hook, overhand > squat kick > step 2 3, bring rear foot up, jump into low kick

Step 1 2, short liver, hopout low kick, cross, switch kick

12 pivot jab overhand

12 step out 23 lowkick

12 pivot head kick

12 step out leg kick pull r knee

12 step out, 1, overhand then roll into securing your left arm across the front of their right hip, stepping lead foot in inside of their lead foot with knee pointing into their thigh, right palm on forehead while ear against their shoulder blade, forward momentum into hook left kick

12 step out 1 2(shotput style), sweep by dip into right arm across front of their hip stepping all the way in so dick under their hips, head up like a takedown, forward momentum and stand up launch

sneak step pivot, slightly end up sideways, step behind, 1 2, angle right dipping slightly to load rear upper cut, step with lead leg and throw followed by hook.

1 2 slip roll hook, dip and shove, hook low kick

Pull the 1  roll the two outside, lead bodyhook, r upper, left hook

12, pull, 2, roll, 2, block the hook, 2, 3, lowkick

123, block, 3, roll, 3, pull (like a cross), 3, lowkick

1, lead upper, right spear elbow, pivot slightly, rear knee, rear kick

Dip jab, right upper, pull, cross, left elbow, grab switch knee, left kick

Stepping:
12, step right, r upper hook cross, step forwards for 112

12, step right, r upper hook cross, step left, 323, step back 12

12 step right low kick hook

—jab

Jab pull 1 foot (to right), lead upper cut to jump with 2 feet, cross, right kick

Jab, pull, lead upper, liver l, cross, left kick

Move head , step, and circle
Jab pull the right cross/jab
Jab roll the cross
Jab smother right hand/jab
Jab catch counter jab
Jab pull cross/uppercut
Jab, scoop lead leg, left knee

Jab, step lead upper, cross, right kick, right knee, hook, spear, pivot, slice down, stiff arm, kick, 4 count

Body chest jab, stand up into r uppercut, hook pivot, overhand, liver low kick

Jab, body cross, lead upper low kick

Jab teep uppercut left knee/
L step backs
Slip combos
Clinch pivot to pocket shots to grabs

Switch jab, inside kick, step back, fake teep face, jab, right kick

Switch jab, pivot, stiff arm push with body weight their upper arm, left kick

Jab while stepping up right foot

Jab, l upper, right hook, liver lowkick

Jab, r upper, hook, check hook, body cross, hook upper

Double jab, slip while cross at chest, hook, cross

Jab, step right, r upper, hook, cross, step back, 232

Hook:

Head hook, body hook, overhand, switch knee, left kick, left hook cross, left kick

323 block 32 roll 23
232 block 23 Roll 32

—---Fakes:

Teep switch kick, switch fake kick into teep switch kick

Fake teep, fake r kick, cross, r kick

1 pull 12 inside kick, 1 pull fake jab 23 low kick

Jab kick, step fake right kick stiff arm low kick

Teep knee, fake knee superman hook left hook low kick

Cross, r knee (one beat), fake cross r knee

Switch kick, fake switch, shuffle back to Ortho moving forward, landing in a 12

Right kick, fake right kick (hump forward stay long square), step forward and rear teep when they check

Teep, Fake front teep, when foot comes down front teep

Rear teep, fake rear teep (knee in front of body), hop switch back into right kick

Fake rear teep, step to their right side while posting/moving them, switch kick

Straight right, straight right into overhand

Fake lowkick(foot comes all the way to parallel with other), when they check, to liver shot

Step Pivot fake jab, cross or head kick

Step Pivot straight palm slap their ear to get them to inside slip into cross or right kick

Hook, fake hook open up titty and step jab

Jab while switching, left kick

Switch,.load hook, left kick

Double switch right kick

Feint right hand where torso is rotates, head kick (or inverse kick)

# Privates

## Monlit

Stance: arms apart, elbows out, butt slighly back, legs bent slightly, hips square, shoulders very relaxed, wide legs apart

Step back: drag front leg stay balanced, step out wide

One two: in a single step forward pushing off back foot, momentum forward, pivot shoulders hips and ankle. Power from ribs Good balance

Jab: forward or move to the side, rotate to extension; step to side slightly before jab lands/ as back foot lands, head over hip

Cross: rotate heel out, momentum forward from back foot, pause weight back/centered slightly before pulling left should back, front shoulder forward, armpit over knee. If you miss, should not hyperextend

Hook: palm down, slightly load rotation (relaxed), weight shift with right foot and shoulder into left foot, head stays level

Right Uppercut: relaxed rotation, squat down slightly 45 degrees out with right heel rotation out
Knee: butt back to load grab arm and shoulder

Front teep: step to front foot's arch to load
Left kick: mini step forward if medium, switch if close, step through if far

Right kick: step out, turn hip,.lift off.of foot more, don't lean back

Double+ kick: slightly hop

Huanuman elbow: fake, step on thigh, grab shoulder and elbow down, jump off while push away

Elbows: should come downwards with palm facing out using foot work and shoulder

Up elbow: flick hair back and use shoulder with foot work

Reverse elbow: step back foot forward and turn to load

Spinning elbow: 1 2 the slip into spin, butt back, keep tight, elbows comes downward to split guard

## Ben Soulfly

Stance: always feet not narrow, hips engaged forward, lead leg turned out slightly

Relax punches and be able to get to kick range after

Always download data and look at what they're doing as much as you are thinking about what you're doing

Block: Strong standing leg locked for checking, not far to the side, foot in line with knee vertically

Step: Step to either side, other hand blocks face, pushing away with foot

Side teep: Side teep if they catch, can step all the way through, standing leg foot pivoted, locked, heel on the ground, keeping foot comes down immediately into non narrow stance

Punch kick: Right punch, right hip stays engaged for kick, no step, torso turns all the way,

Evade teep: Step to side and inwards,  Knee/ Elbow when trying to evade their teep

Stiff arm: back foot pushes, use body weight, left shoulder and elbow up

Left kick: bring right leg slightly up and left kick, can turn before to get the belly

Fake teep: by showing bottom of foot

Knee block counter: if knee is angled up, step to side and scissor sweep. If the knee block is strong, switch hips, put hand on their instep and push while pulling their neck

Missed switch kick: If spinning back fist, right kick when they're turned around taking head off line

If spinning kick, teep their back/butt when they spin
—
Nongo kick: from massive distance with huge step when they are relaxed not expecting the range to be possible

Listen for the feet engagement with 1 2, shoulders relaxed forearm tight

Jab hook with an intern rotation of fist

Jab using strong back foot relaxed with correct timing, can clear a lot of distance

When setting up kick, the hook should be a bullshit arm punch where the right kick stays engaged

Hook, knee: can hold their arm (like for an elbow) to throw the knee.

Better to have some connection with long knee

Left kick while stepping back foot up rather than switching or stepping to deal with punchers

If you try to knee and they backup turn it into a kick.

If you miss a shot and over extended then land and use momentum for another shot (miss knee into kick, miss kick into knee)

Against punchers, extended arm (don't drop) when kick and knee

Double up on knees same side (curved or straight or both) when clinching so second one lands during breath. Must be super quick.

Clinching, dealing with punchers in tight spaces, left and switch kick

Up elbows after pummeling

kick from double bicep control by making a little bit of space with feet. Keep grips to give elbow and avoid elbow or punch.

Right hook to body, load without moving arm outward, be relaxed, elbow gets extended slightly, hit behind their guard

Kicking to rear check: return kick not too wide or narrow, hip engaged to whole time to efficiently check, shin is vertical in the air and standing leg punching into ground

Parry jab into left kick: parry their jab slightly up and left to expose body, switch at same time, back of left hand on right ear to block a hook, swing arm for kick. Consider return leg into southpaw and switching back to Ortho to maximize distance and checking ability

When someone gets on the inside, grab them on the outside and control their elbow that is on your beltline. Only go for the grab(2 hand on their same side neck and arm) if throwing a knee

Punch their guard on both arms same side toale them brace wrong

parry jab or cross with vigor to turn them (can kick or punch)

Bracing: composed while bracing, not extending, be ready to throw after the shot or frame into knee or left spot kick

Clinch:
Jaw face lock them when they're in hip control

Go from balanced hands, to pushing with forearms, to grabbing with hands to pull

If arm is stuck, try going hand first down between elbow

If they push on your jaw (left side) and you can't move their arm past your face, use your right hand with palm facing you to pull down on arm while other goes for neck while turning and knee

Use your instep on their thigh to break their posture if they are body to body

For knee bump sweep, rear teep to thigh and land knee on inside of their thigh while your arm goes to the opposite side of their neck from your knee. Bump knee out and rip with other hand

Hand fighting: not extending too much, fake jab off of touch, step to side while pushing the arm (or not) and kick good distance, put their weight on their lead leg and to bring their arms up

Long guard: parry their guard and kick kidney

When they grab your neck don't go straight to their neck.instead have inside position and move their arm outward while your head goes opposite direction

If their hips are too far in to block your knees go for body lock

When sweeping bump and lift if you can

When they try to body lock you move hips away, shoulders up, and use distance to pummel in

## Bryan

Priority fixes:
Shoulder in front
Never let backhand under eyebrows
Never let back foot not point forward
Hips and movement
Strong feet offense and defence
Push off with feet to move
Kick without any tell
No weird switch/pivot for left knee/kick
Laser pointers all times on their chin
Play more on the outside
Feel for pauses and rhythm

Right hand:
Don't be afraid to get hit
Return cross using hips with lasers on them
Elbow sits directly on ribs (elbows slightly inward if totally squared up)
Guard at eyebrows, right hand slightly in front
For power cross make sure lead leg is giving you a frim base and not going to fall over

Shoulder shoulder touches chin

Pull back leg a half step to intercept them with an overhand, pivot lead upper, peel right hook

Cross, block, cross, roll, cross
Cross, block, cross, peel, right hook?
Cross, block, cross, step right with the cross

Against Southpaw: step left, cross between guard, peel right hook

Step forward with back leg launching cross where it lands as the back foot lands

Step right and land cross when left foot lands with momentum forward. Shoulder up and lasers on them.

Overhand, ? Peel?

Jab high, cross to body, 2 foot pull, cross

Left kick, ? Cross?
